SIGMANEST

SigmaSCHEDULE

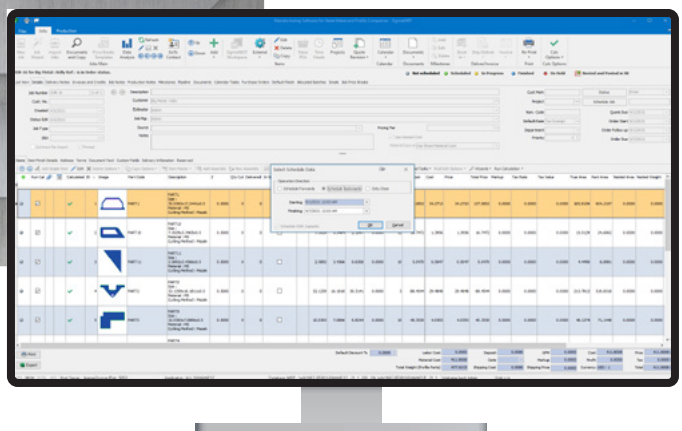

Dynamic Scheduling for Fabricators

Shopwide Accuracy, Instant Flexibility

SigmaSCHEDULE brings true dynamic scheduling unique in the fabrication industry. Accurately schedule projects with nested programs, parts assigned across many sheets, multiple cutting processes, and secondary operations such as bending and welding. The software can be configured for your specific business needs, but can also fully reschedule the entire operations at any point in the day based on current production capacity, job priority, and work to be completed.

Scheduling Forward, Backward, and Pre-Scheduling

SigmaSCHEDULE stand alone software that processes all scheduling requests from SigmaMRP and SigmaQUOTE. Users can schedule forward (FIFO/as soon as possible), or backward from the due date (just in time). Estimators can use preschedule jobs to ensure delivery dates can be met before accepting the order.

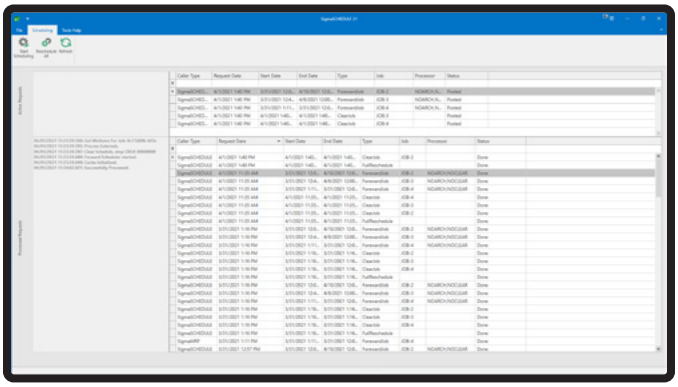

- Accurately schedule nests containing parts from multiple jobs
- Setup easily, run seamlessly
- Fully integrates with the SigmaTEK suite of products

SigmaSCHEDULE

Schedule every step of production

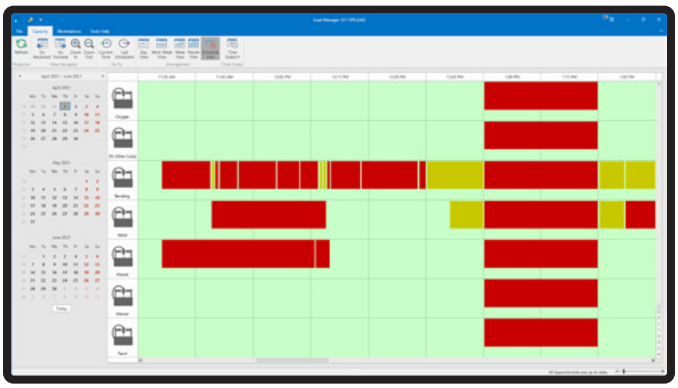

- All production operations are scheduled based on job priority and due date as well as machine capacity
- Schedule forward to complete work as soon as possible or backward to complete work just in time for delivery
- Nests (containing parts from many different jobs) are scheduled and operation dependencies are maintained
- All jobs can be rescheduled multiple times per day for the most efficient schedule

Schedule every step of production

Pre-schedule jobs

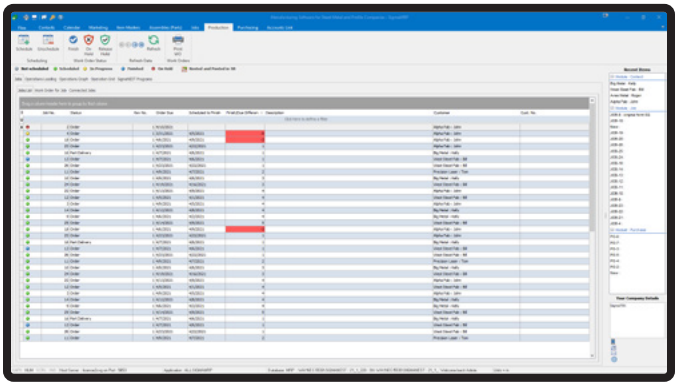

- Jobs can be scheduled before accepting the order to verify ability to make the due date
- Jobs from both SigmaMRP and SigmaQUOTE can be scheduled
- Schedule everything from simple parts to large complex assemblies

Works with Load Manager to create custom calendar/shifts

Production overview

- Easily identify the jobs that will be late, and how late they will be, based on the schedule
- Convenient production status indicators for each job
- Quickly place jobs and hold and remove them from the schedule

Production overview

Powerful Ecosystem

- Fully-integrated SigmaTEK suite creates a single powerful platform for business and production
- Push and pull integral business information from your ERP/MRP or accounting system
- Bridges the gap between the engineering and the business side of your operation with direct CAD interfacing and exchange protocols
